

AppCompatActivity

```
classDiagram
    class AppCompatActivity
    class "com.example.usuario_upv.proyecto3a.UserConfig" {
        ~ isValid
        + onOptionsItemSelected()
        # onCreate()
    }
    AppCompatActivity <|-- "com.example.usuario_upv.proyecto3a.UserConfig"
```

The diagram shows a class hierarchy. At the top is a class box for 'AppCompatActivity' with three empty compartments. Below it is a class box for 'com.example.usuario_upv.proyecto3a.UserConfig' with three compartments containing '~ isValid', '+ onOptionsItemSelected()', and '# onCreate()'. A blue arrow with an open triangle head points from the 'UserConfig' box up to the 'AppCompatActivity' box, indicating that 'UserConfig' inherits from 'AppCompatActivity'.

com.example.usuario
_upv.proyecto3a.UserConfig

~ isValid

+ onOptionsItemSelected()

onCreate()
